

## Panel Glide Blinds Information Blinds

Panel Glide Blinds have been designed as a modern alternative to Vertical Blinds. The panels move effortlessly through multiple tracking systems with the use of a smooth operating wand that eliminates the need for chains and safety devices and enhances the sleek elegance of this simple to operate blind.

With Panel Glide Blinds you have the option to have them open from the left, right or centre, making these blinds the ideal window covering for sliding doors, large windows and the perfect choice for a room divider. When open the panels stack neatly behind each other, letting all your natural light in. When the panels are pulled closed they are used to control privacy, light and heat. You have the ability to have your Panel Glide fabric match to your Roller and Roman Blinds too, to create a consistent colour scheme or design throughout your home.

With Panel Glide Blinds you have the ability to select from a vast selection of Vision Screen, Light Filtering & Room Darkening fabrics. You have the added ability to select your panel width ranging from 400mm to 1000mm. Please note that your maximum Panel Glide width is 4800mm with a blind drop of 4200mm.

If you have any further questions regarding Panel Glides, please contact us and we'll be happy to assist.
